DETAILED ACTION

QUAYLE

This application is in condition for allowance except for the following formal matters:

Claim Objections

Claims 2-4 are objected to because of the following informalities:

Claim 2, page 6, line 7, "that" should be deleted.

Claim 2, page 6, line 9, "that" should be deleted.

Claim 2, page 7, line 2, "the basis" should be -- a basis --.

Claim 2, page 6, line 19, "the converting section" should correctly be -- the signal converting section --.

Claim 3, line 2, "1" should correctly be -- 2 --.

Claim 4, line 2, "1" should correctly be -- 2 --.

Regarding claims 3 and 4, claim 1 is already canceled.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

Claims 2-4 are allowed.

Claims 2-4 call for, among others, a correcting section that outputs a gain control signal for the nonlinear power amplifier, and a phase correction signal that is used in the correction of the phase signal in the converting section, wherein the correcting section has a correction table that is produced on the basis of an output signal of the nonlinear power amplifier and the input signal of the orthogonal coordinate system, and outputs the gain control signal and the phase correction signal with reference to the correction table on the basis of the amplitude signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Hasegawa (6,507,731); Kimura (5,404,378)) show further analogous prior art circuitry. However, they lack a correcting section that outputs a gain control signal for the nonlinear power amplifier.
